## DigiTrans2022 – Building Bridges to Better Decisions

**Interoperable Platforms – A UNESCO Perspective**  
**Borhene Chakroun, UNESCO**

# A disrupted Global Education and Training Landscape

Global monitoring of school closures caused by COVID-19

43,518,726 affected learners  
2.8% of total enrolled learners  
6 country-wide closures

● No data   ● Partially open   ● Closed due to COVID-19   ● Fully open   ● Academic break

# The COVID-19 Crisis has deep impacts on Education

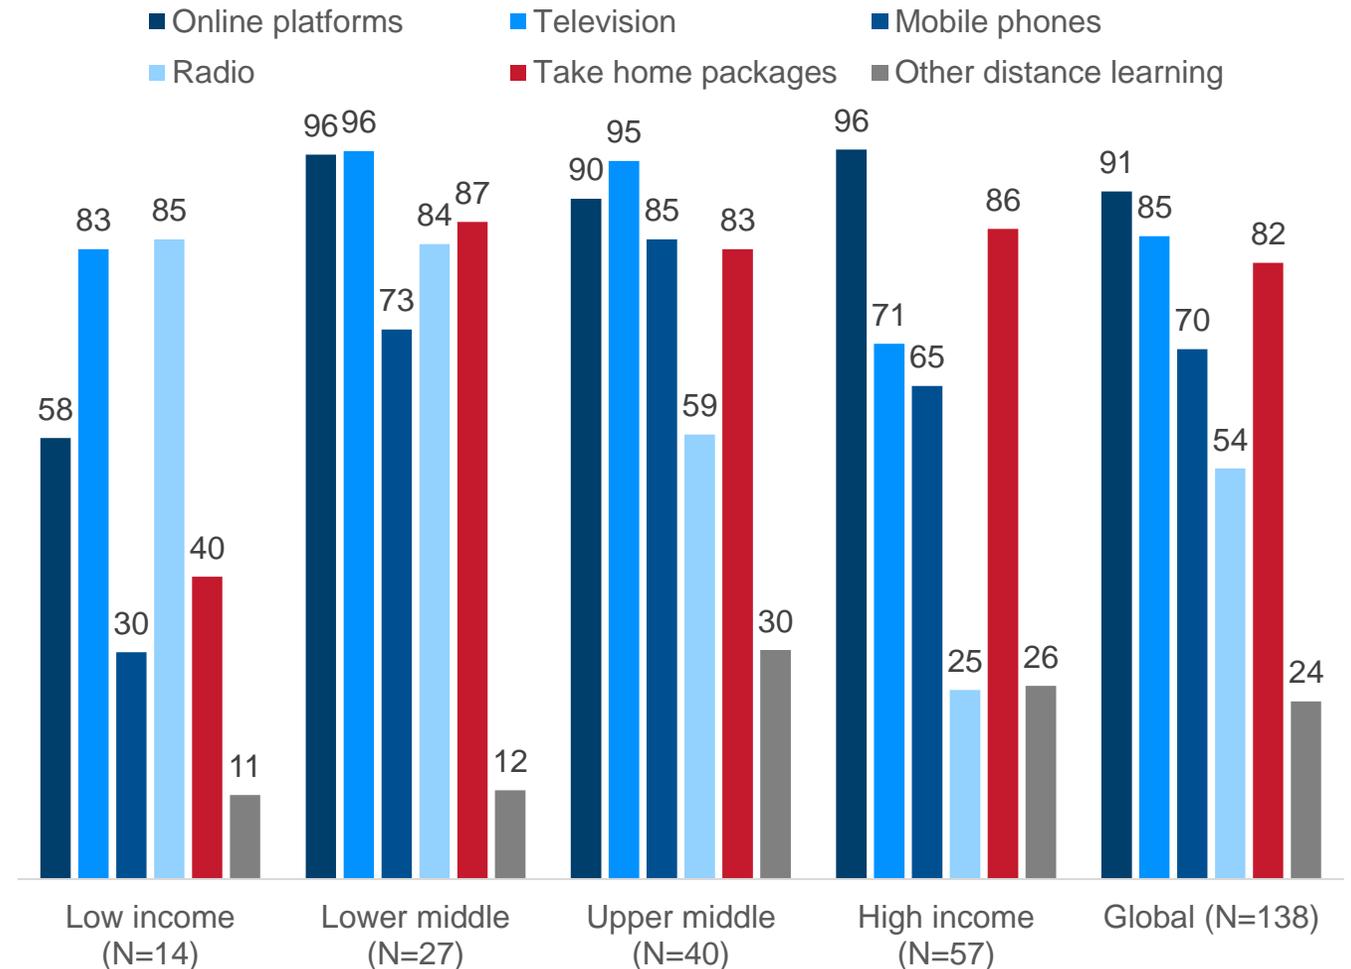

# Emerging Global Digital Learning Ecosystem

# Governments responded to school closures by offering various high- and low-tech remote learning solutions

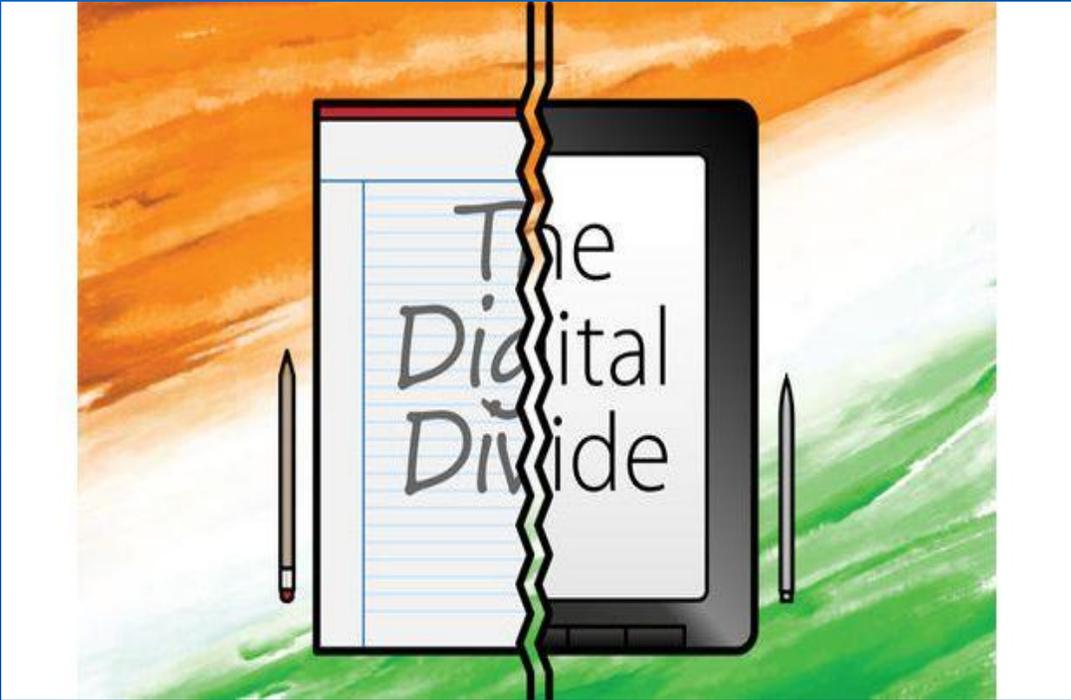

- **TV and radio** were more popular among low-income countries, whereas **online platforms** were the most popular modality in high income countries.
- Most countries provided **multiple modalities** for remote learning across education levels. **More than half** of the countries reported using five or more remote learning modalities.
- **Combining one-way technologies with interactive mobile-based modalities** can allow tailored feedback from teachers to students, and help improve access for marginalized children.

Share of respondent countries offering a remote learning modality across at least one education level

# The Digital Technology Connects

But also divides

# Connectivity Declaration

## A Human-Centered Connectivity

1. Centre on most marginalized

Act to address the digital divide to ensure the right to education

2. Steer Digital Transformation

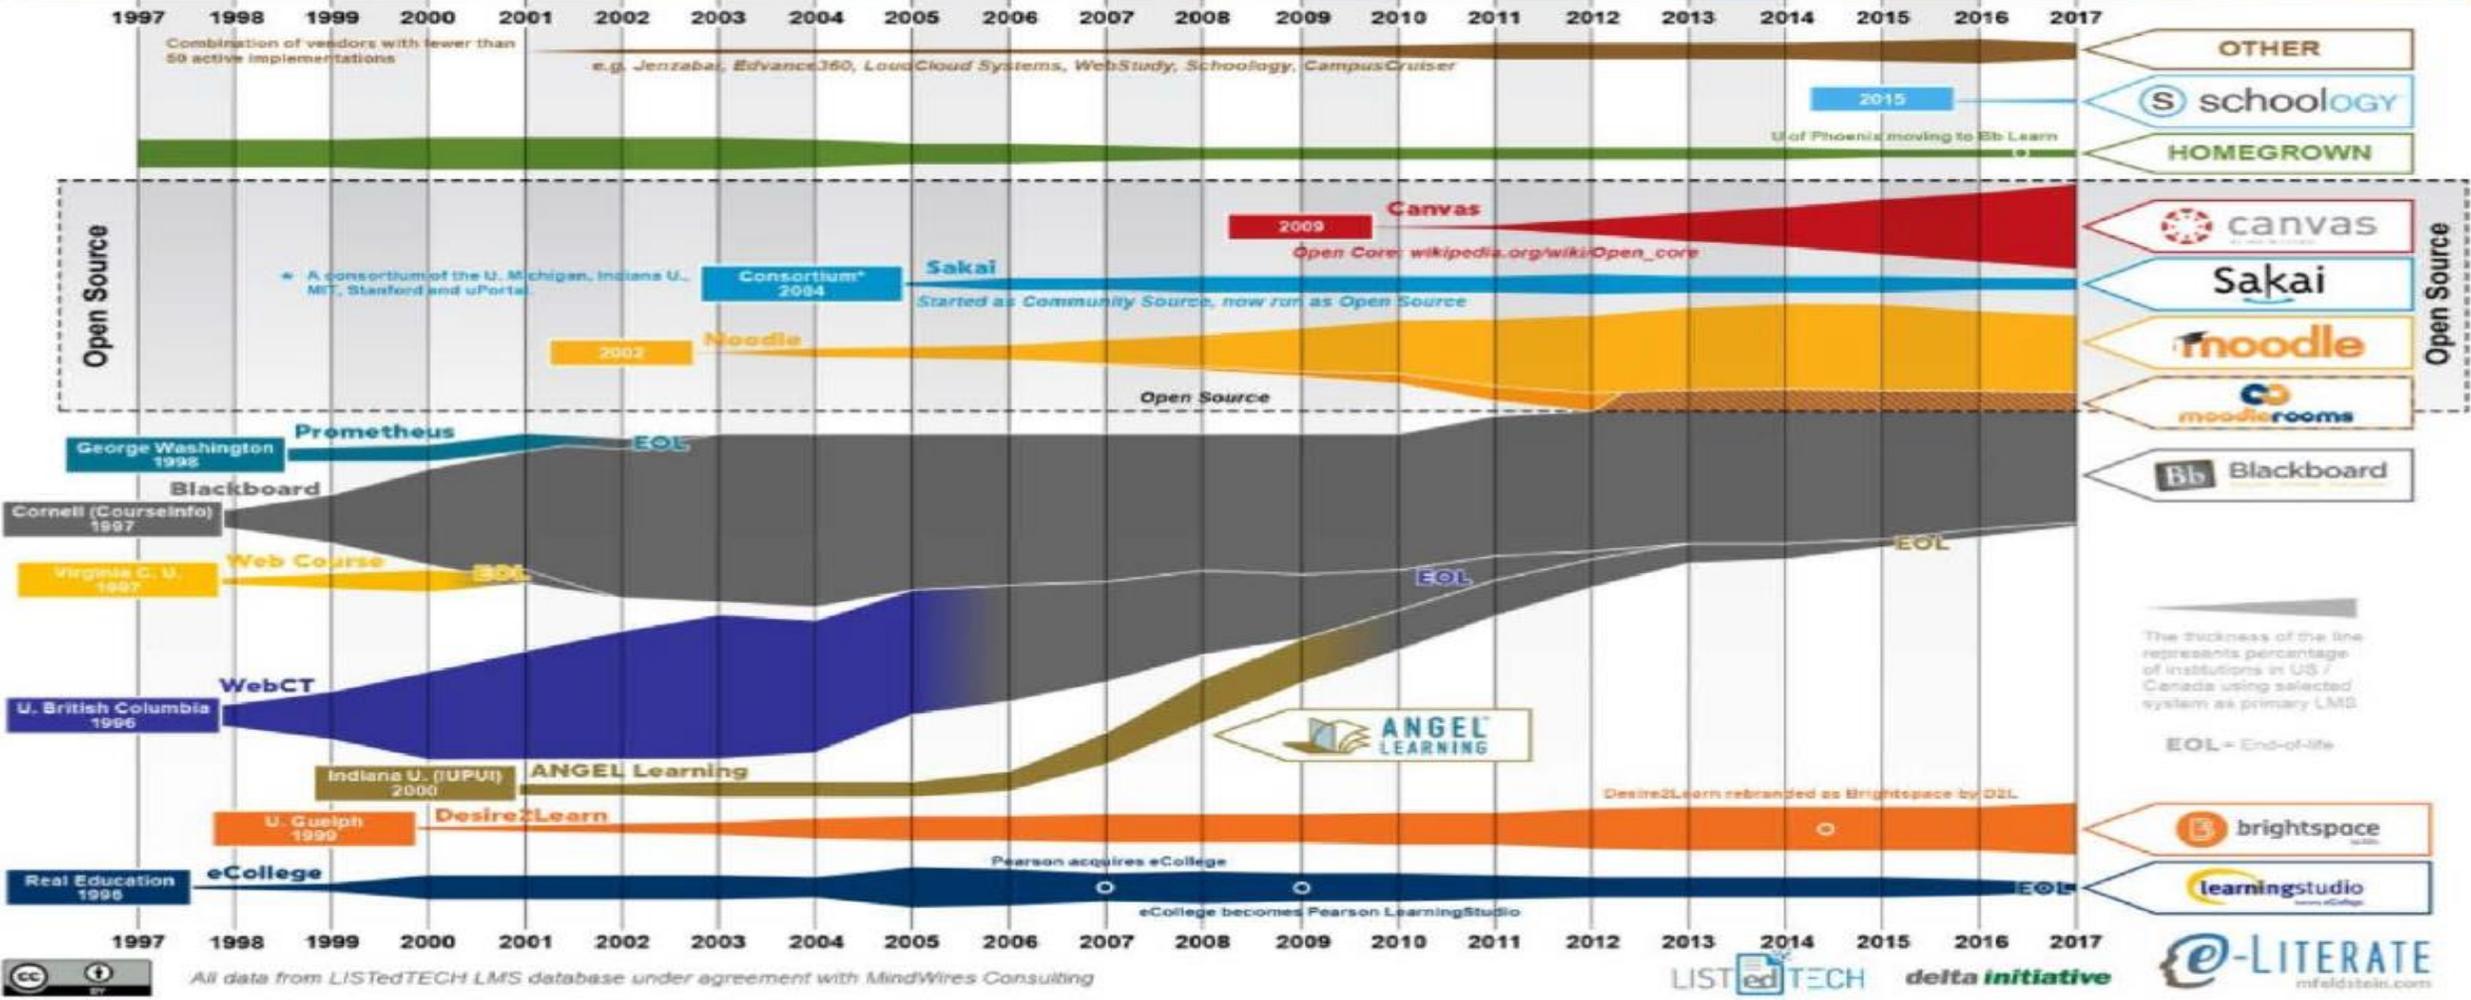

Digital Transformation should be driven primarily by education needs

3. Expand Investment

Invest in free and high-quality digital education content

# LEARNING MANAGEMENT SYSTEM

# LEARNING PLATFORM

Source: e-Literate

# Next Generation of Digital Learning Environment

An ecosystem of interconnected and flexible applications that supports learning through 4 key dimensions.

1. Interoperability

Develop processes, leverage technologies, capacitate actors and set norms/standards

2. Personalization

Support all learners and users experience, narrow the digital divide

3. Analytics

Invest in data analytics to support decision making

4. Collaboration and cooperation

Build community of practices, international cooperation, Join international agreements

# 2 Interconnected Challenges

Responding to

Leverage  
Technology

Protect Learners

For Lifelong Learning  
Opportunities for All

Learners Data Protection  
within a Lifelong Learning  
Perspective

A wide-angle photograph of a long, straight asphalt road stretching towards a range of rugged, snow-capped mountains. The road has a dashed white center line and solid white edge lines. The landscape is a dry, open plain with sparse, low-lying vegetation. The sky is a clear blue with scattered white clouds. The overall scene conveys a sense of a long journey or a path leading to a distant, majestic destination.

**Where do we go from here?**

# Do we have a vision for interoperability? A New Social Contract for Education

## Future of Learning

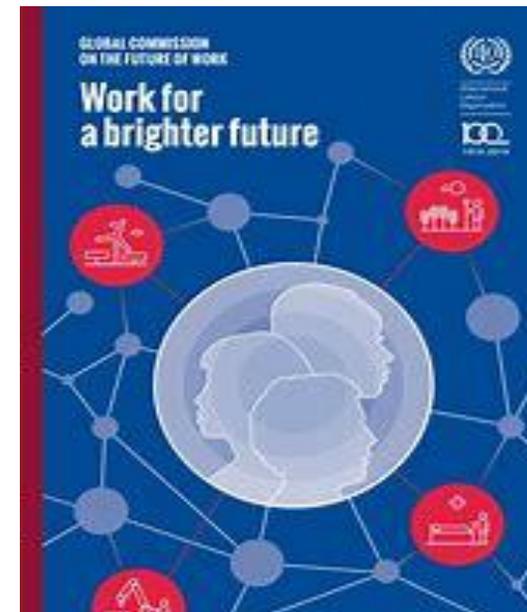

## Common Denominators:

- Human-Centered
- Lifelong Learning for all
- Sustainable Economies and Societies

## Five Dimensions of Social Contract

1. Pedagogy
2. Curricula
3. Teaching
4. Schools
5. Learning in all areas of life

## Future of Work

## Lifelong Learning Journey

- Connecting Learning Spaces
- Understand the Learning experience
- Assessing and Recognizing Learning: Micro-credentialing, stacking and interoperability
- Linking learners with relevant learning opportunities

Culture of Lifelong Learning

## Key actors

- Learners, teachers, managers
- Social partners
- Governance actors
- Providers

## Enabling Multi-layers factors

- Quality assurance and technology-driven standards
- Funding and Partnerships
- Compliance and integration
- Interoperability

1. Data protection as fundamental human right
2. Data for individualized learning experience and identity
3. Privacy by design
4. Privacy as trust
5. Data as driver for better policy in education and training

# Directions for UNESCO's work

**Data transparency:** How do we ensure that data is transparent, open to be analyzed and understood by all, without causing insurmountable ethical issues?

**Data fairness:** How do we ensure that the data fairly represents all learners equitably?

**Data equity:** What measures are needed to mitigate potential bias by gender, ethnic grouping, religious affiliation, demographic group, socio-economic status, etc., within education planning processes that use advanced analytics against data profiling (or deterministic algorithmic interference)?

**Data privacy:** How do we ensure data privacy and anonymity when data-mining makes it possible to de-anonymize apparently anonymized data; and how do we prevent and mitigate data breaches and surveillance?

**Data ownership:** How do we resolve who owns the data IP, the EdTech provider or the learner, especially given that the learner usually owns the IP of anything else that they create, such as a poem or a painting?

**Data and the common good:** How do we reconcile data captured by commercial players ultimately for profit, with data captured and analyzed for the common good? How can data help to advance SDG4 and the 'right to education'?

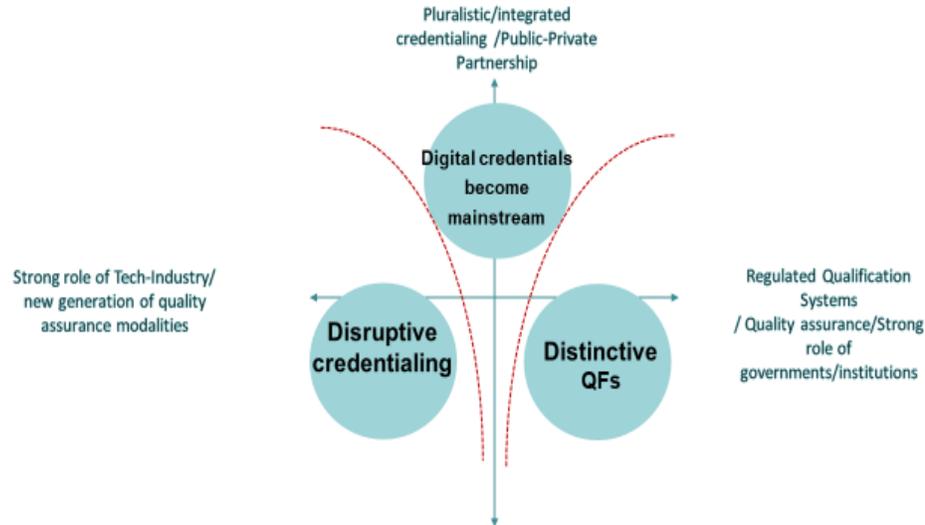

“We tend to overestimate the effect of technology in short-run and underestimate the effect in long run”

Roy Amara in *The Age* 31 October 2006

## Possible Scenarios

Education 2030

UNESCO EDUCATION SECTOR

14

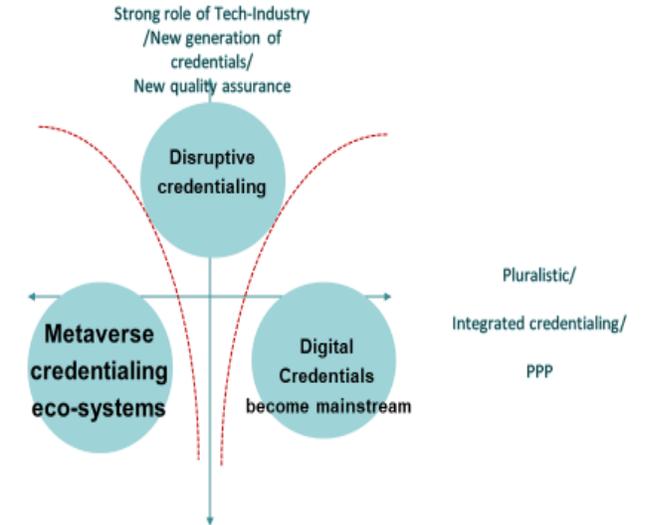

# Pre-Covid thinking

## Possible Scenarios by when?

Education 2030

1. Experience that spans both the digital and physical worlds, private and public networks/experiences, and open and closed platforms
2. Offer unprecedented interoperability of data, digital items/assets, content, and so on across each of these experiences
3. Populated by “content” and “experiences” created and operated by an incredibly wide range of contributors, some of whom are independent individuals, while others might be informally organized groups or commercially-focused enterprises
